Solution Overview

Burntsand's Microsoft Active Directory Design and Implementation solution helps you maximize the value of Active Directory for your organization by leveraging our skills and experience. With Burntsand executing the design and implementation, your IT resources can stay focus on the day-to-day activities of running the IT organization.

Microsoft Active Directory offers the greatest benefit to organizations with:

- Complex portfolio of applications and users.
- High rate of change due to reorganization, mergers and acquisition, growth, consolidation, or new applications and users.
- High cost of administration and end user support.

An Active Directory implementation allows your organization to:

- Facilitate more effective management of operations by streamlining the process of setting up new users, terminating the rights of old users, and improving ease of access.
- Minimize the potential for security breaches.
- Facilitate rapid consolidation and M&A integration with little or no interruption of service.
- Improve IT's ability to respond to demands for new applications and services.

With Burntsand's Active Directory design and implementation, organizations will enjoy the following additional benefits:

- A quality product with a quality delivery. The Burntsand solution utilizes Microsoft's Best Practices for Active Directory implementation and the Microsoft Solutions Framework (MSF) and Microsoft Operations Framework (MOF) methodologies to ensure the transition is smooth, and you get the most out of your investment.
- The IT organization will be able to continue its day-to-day activities to maintain high quality of service.
